

The Soil Ecology Lab & The Corn Breeding and Genetics Group

Departments of Natural Resources and Environmental Sciences & Crop Sciences

Illinois Organic Internship

Are you curious about conducting research in environmental sciences or food production?

Our groups are hiring students interested in research experiences and in learning about modern organic food production, soil health, and corn breeding techniques for regenerative systems.

Student interns will work closely with graduate students in laboratory as well as in field settings. Opportunities for independent projects will be available for students that continue to work in the Fall.

Students should expect to work from 20-40 hrs/week depending on availability and enrollment in summer courses. Hourly rate ranges from \$15-\$17/hr depending on experience.

Qualifications

- Experience being and working outdoors is required
- Organized, responsible, and willing to learn new procedures

Application: Interested students please send your resume with one professional or academic reference to

eranki3@illinois.edu and abbysl3@illinois.edu by April 26.
